

Piql and Safespring collaborate for enhanced services

Safespring, a Swedish cloud service provider, known safety and high-quality service, is collaborating with the trusted and resilient digital preservation provider — Piql AS.

Safespring supplies locally produced safe cloud services, enabling high quality performance and protection, in line with Swedish and Norwegian standards and regulations. Known for its premium service, this collaboration presents highly secure offline storage opportunities for clients.

Piql, known for keeping data safe offline for centuries, can now offer clients a new standard of high-quality online storage hosted in Safespring and accessed through the same Piql experience.

'This collaboration makes it easy for our customers to stay compliant with local regulations and at the same time keep up with the digitalization of governmental institutions and companies that's happening right now' says Fredric Wallsten, CEO at Safespring.

Rune Bjerkestrand, Managing Director of Piql,

said that this is a natural partnership with both companies focused on the safe storage of data. *'This service expands our secure storage to the online environment in addition to our offline system, providing high speed access for all client archival data,'* he said.

The new service is being seamlessly integrated to the Piql workflow. Clients can enjoy instant access to digital files or archival packages by enabling the Piql online storage option. All files are automatically ingested to a secure online data center in Norway, with access to online files through the same Piql user interface as offline files.

'The service is optimised for clients that need easy access and store large number of files at a low cost, type e-archives, governmental agencies or web applications for publishing data. There are no upfront or transfer costs, simply pay as you go,' Rune said.

Both Piql and Safespring are committed to providing safe, high quality data storage services and this collaboration strengthens these services.

About Safespring

Safespring delivers secure, fast and flexible cloud and IT infrastructure services based on open source and open standards. Safespring, a Nordic company, designs, builds and operates its services and delivers them from local datacenters to ensure our customers data sovereignty and ability to comply to GDPR and other local regulations. With tools for automation and open standards we contribute to our customers' digital transformation without vendor lock-in. Our platform is designed from the ground up with focus on security and compliance.

About Piql

Piql is a specialist provider of digital preservation and long-term data storage. With a global footprint, we offer tailored services to a range of sectors including historical and memory, audio visual, private enterprise and government. Our purpose-built technology can keep data alive for hundreds of years, without the need for migration. The data is secure, unalterable and can be recovered without the risk of data loss, no matter how long it is stored for. It is the only service of its kind and the only offline, migration-free technology available for long term digital preservation.
